

ArbiSim Guard

Frontend Review

SUMMARY

The landing page clearly explains the product, but it doesn't yet reflect the sophistication of an AI finance platform. The goal is to instantly build trust, show the product in action, and deliver a premium experience that matches the technology behind ArbiSim.

OVERALL IMPRESSION

4.0 /10

The foundation is there, but the visual quality and presentation don't yet reflect the strength and maturity of the product.

Key Findings & Recommendations

What needs to be done to take the ArbiSim Guard frontend to the next level.

WHERE IT FALLS SHORT

1. Feels generic, not premium

The use of emoji-style icons, basic cards, and repeated layouts makes the site look like a template instead of a serious AI finance product.

2. Explains more than it shows

Most sections describe what ArbiSim does instead of showing the product in action. This reduces trust and engagement.

3. Weak visual hierarchy

Every section has the same visual weight. There's no clear flow or focus, making it harder for visitors to follow and remember the key message.

WHAT NEEDS TO BE DONE

1. Make it look premium and credible

Use a professional icon set, stronger typography, better spacing, and a refined color system to instantly elevate the visual quality and build trust.

2. Show the product, not just explain it

Add screenshots, UI previews, or simple visuals that demonstrate how ArbiSim works in real scenarios. This helps visitors understand faster and builds confidence.

3. Build trust early

Add trust signals above the fold — security, partners, testimonials, metrics, or audit information. Reassure users before they engage.

4. Create a clear visual flow

Design each section with a unique purpose and visual treatment to guide users from understanding to action. This improves engagement and conversions.

Next Step

The landing page already has a strong foundation. Taking these steps will make it look and feel like the advanced AI finance platform it truly is — more premium, more trustworthy, and more convincing to users and potential partners.
